## About me:

My passion for computer science began with the Academy+Plus programming school. I then further-developed my skills through online research, courses and coding books.

## **Objective:**

I'm currently looking for a challenging software development position in which I would get the chance of working with experienced engineers, expand my array of knowledge and improve myself.

#### Technical skills:

- Basic data structures and algorithms
- Experienced with C# and .NET Framework, but also familiar with C, Java and Python
- Basic knowledge of HTML, CSS, Bootstrap, JavaScript and SQL
- Good understanding of OOP and MVC
- Basic knowledge of working with data retrieval through RESTful APIs and ORMs

# Soft skills:

- Fast learner
- Team player
- Creative
- Problem solver

### **Projects:**

- **YouTube Downloader C#** Basic application that implements query calls on the user's behalf, to the Google Api through Oauth 2.0. Displays lists with a user's playlists and liked videos and features download functions in both .mp3 and .mp4 format.
- **Steganography App C#** An application able of encoding user input into .png images and decoding messages from them, by splitting ARGB pixel data and using the least significant bits.
- **FDF C** 3D User input renderer. Features implementations of computer graphics foundations. Renders a wireframe out of specific user input which can be rotated and zoomed.
- **Swingy** *Java* Terminal-based rpg game. It features several hero classes, droppable and equipable items, all stored in an embedded relational database. Save & load persistence system. Self-made algorithm for generating random dungeons.
- MircRipOff JavaScript Client-side messenger app based on sockets and Ajax
- **StockTrader Python** Simple web app that works with the IEX Api in order to retrieve stock prices.
  - + Other less significant projects are available on my Github account.

#### **Education:**

- Academy+Plus 2017 2018
- Bucharest School of Economics FABIZ (English) 2017 present
